105 System Product Selector

By using a simple 'cookbook' approach it is possible to tailor the handling characteristics and the physical properties of the cured epoxy to suit the working conditions and specific application of the project in hand.

1. Begin with 105 Epoxy Resin, the basic ingredient of all WEST SYSTEM epoxy compounds
2. Control the cure time or adjust to working temperature or working time required with one of four specially formulated WEST SYSTEM hardeners
3. Select the correct set of MINI PUMPS

4. Adjust the strength, weight, texture, sandability and colour of the cured epoxy with one of eight WEST SYSTEM fillers. Adjust the viscosity of the resin/hardener mixture by the amount of filler added or provide specific coating properties with WEST SYSTEM additives.
